SUMMARY

Computer Science student and backend engineer specializing in high-concurrency architectures and scalable RESTful APIs. Active competitive programmer (**CodeChef 3-Star**, Max: 1656) with **750+ algorithmic problems solved** across LeetCode & GFG. Adept at driving full-stack development utilizing Node.js, Python (FastAPI), and Next.js, paired with robust database orchestration (Redis, MongoDB, SQL). Integrates structured problem-solving with DevOps practices (Docker, Turborepo) to deliver highly optimized, production-ready systems.

EDUCATION

Jaypee Institute of Information Technology (JIIT) – Noida, India
B.Tech in Computer Science and Engineering

May 2027
CGPA: 7.63/10.0

WORK & LEADERSHIP EXPERIENCE

RIDE Hackathon – Innovation Hub Lead

Feb 2026

- Managed operations, social media strategies, and logistics for over 100 competing teams.

JPMorgan Chase – Software Engineering Intern (Virtual)

Jun 2026

- Handled live financial data feeds, optimized SQL database queries, and implemented data visualization frameworks ([Certificate](#)).

Commonwealth Bank – Software Engineering Intern (Virtual)

Jun 2026

- Developed scalable application features, applied unit testing models, and managed package dependency workflows ([Certificate](#)).

SKILLS

- **Languages:** JavaScript, TypeScript, Python, Java, C++, HTML5, SQL
- **Frameworks & Libraries:** ReactJS, Next.js, Node.js, Express, FastAPI, Tailwind CSS, Pydantic, SQLAlchemy, SQLModel, SQLAlchemy
- **Databases & Caching:** MongoDB, PostgreSQL, Redis, Convex, NoSQL & Relational DBs
- **Tools & DevOps:** Git, GitHub, Docker, Docker Compose, Turborepo, Nginx, Alembic, Linux/Bash, Ubuntu, CI/CD

PROJECTS

1. GrocerEase - Hyperlocal Logistics Engine

Sep 2025

Tech Stack: Node.js, Express, Redis, MongoDB, Python

- Eliminated concurrent race conditions and inventory overselling to guarantee data consistency via MongoDB ACID transactions and session locking, while reducing delivery routing latency by implementing CVRP optimization algorithms.

2. NeuralDesk - AI Support Engine [GitHub](#)

Jan 2026

Tech Stack: ReactJS, Next.js, TypeScript, Convex, Turborepo, Tailwind CSS

- Architected a scalable SaaS platform and standardized semantic UI consistency across decoupled web interfaces by developing a modular component library within a Turborepo monorepo using ReactJS, Next.js, and Tailwind CSS.
- Secured multi-tenant organizational data and isolated user sessions by designing a serverless NoSQL database schema and robust APIs using Convex.

3. HELIX - Enterprise RESTful API Engine [GitHub](#)

May 2026

Tech Stack: Python, FastAPI, Pydantic, JWT, Ubuntu, CI/CD (GitHub Actions)

- **Engineered a RESTful backend ensuring 100% strict type safety and request validation** by integrating FastAPI with Pydantic serialization schemas.
- **Secured system endpoints and authenticated user sessions** by implementing standard OAuth2 flows using JSON Web Tokens (JWT) and pwdlib cryptographic hashing.
- Improved **deployment reliability & automation**, as measured by zero manual deployment steps and continuous updates, by using **Ubuntu server with CI/CD pipeline for automated testing and deployment to production**.
